

DISCHARGE SUMMARY

40-009

49878

NAME	DR. Guattery	ROOM NO.	HOSP. NO.
ADMITTED 1-28-80	DISCHARGED 4-7-80	FROM	TO
NEW HOSP NO.			

FINAL DIAGNOSIS: Obstruction to the sigmoid bowel associated with changes from retracted diverticulitis. 700858
Organic brain disease.

SURGICAL PROCEDURE & DATE:

PLEASE COMPLETE THIS FORM IN FOLLOWING ORDER:

History, Physical Findings, Laboratory & X-ray Data, Course and Disposition

82-year-old lady transferred from ECF to the acute Hospital on 4-7-80 where she was being prepared for sigmoid resection.

Please see detailed Discharge Summary from the acute Hospital to ECF.

Since the time that she has been in ECF she has improved, has gained weight, become much stronger, quite cooperative in terms of her responses and is able to sign for her operation without any evident difficulty.

PE: Improvement has been associated with her strength, improvement in her general muscular and body tone. Has a well functioning colostomy at the present time and repeat barium enema has indicated that the lesion in the sigmoid area is most probably secondary to diverticulitis and not cancer.
